

WinPMR Reporting Software for WinPM® SCADA

WinPMR Reporting

- WinPMR Reporting software is a powerful reporting tool for WinPM® SCADA system.
- Easy to install and no configuration requirements for WinPM project are necessary.
- Open your project in WinPMR IDE interface and get configuration of whole WinPM project automatically.
- You may add tags to the database sampling configuration and select sampling ratio for the acquisition cycle easily.

WinPMR is DDE Client of WinPM SCADA

- WinPMR acquires tag values of WinPM via standart DDE communication interface.

Diagnostic Windows

- WinPMR offers diganostics windows to inspect variable values online via DDE communication.
- Also, you may inspect historical values recorded to the database from Database diagnostic window.

Password Protection for Unauthorized Access

- WinPMR denies unauthorized access to WinPMR configuration and historical database.

ODBC Connectivity

- WinPMR offers ODBC connectivity to record sampled data to any database that supports ODBC connectivity like Microsoft Access®.

Report Generation from Templates

- WinPMR IDE interface offers report configuration tab to configure data connection and chooses tags that will be used in the report.
- You may create custom report by defining :
 - Microsoft Excel® template (You may create templates in any form that you want),
 - Data connection to the template,
 - Reporting interval.

Auto Generation and Printing of Reports

- Auto printing of reports periodically which are configured as cyclic/acyclic.

- WinPM® is registrated trademark of Siemens Energy & Automation, Inc.
- Microsoft Excel® and Microsoft Access® is registrated trademark of Microsoft Corp.
